Ask your doctor or pharmacist for advice before taking any medicinal product.

Rancangan Leaflet

Driving and using machinery:

It is improbable that vaccination will induce an effect on the ability to drive or operate machinery.

List of excipients with a well-known effect:

Formaldehyde

Use of other medicinal products:

The immunological response may be diminished in the event of immunosuppressive treatment. Please inform your doctor or your pharmacist if you are taking recently taken any other medicinal product, even without a prescription.

3. HOW TO USE AVAXIM 80U Pediatric

Posology:

The recommended dose is 0.5 mL for each injection.

The vaccination schedule includes a primary vaccination dose. It is recommended to administer a booster 6 months later.

Method of administration:

Intramuscular route, into the upper arm muscle.

Shake before use until you obtain a homogeneous suspension.

If you miss a vaccination with AVAXIM 80U Pediatric:

Your doctor will decide when to administer the missing dose.

4. WHAT ARE THE POSSIBLE UNDESIRABLE EFFECTS?

As for any medicinal product, Avaxim 80U Pediatric is liable to have undesirable effects:

The most frequent reactions are:

-local reactions at the injection site, such as pain, redness, swelling or induration,

-Systemic reactions such as headaches, gastrointestinal disorders (abdominal pain, diarrhoea, nausea, vomiting), muscle and joint pain, transient behavioural disorders (loss of appetite, insomnia, irritability), fever, asthenia.

Skin symptoms (rash, urticaria) have been more rarely reported.

All the undesirable effects were moderate and limited to the first days following the vaccination, with spontaneous regression.

Please inform your doctor or pharmacist if you notice any undesirable effects not mentioned in this package insert.

5. HOW TO STORE AVAXIM 80U Pediatric?

Keep out of the reach and sight of children.

The vaccine should be stored away from light, between +2°C and +8°C (in a refrigerator).

The vaccine should not be frozen.
