

Nama Produk : Brosur FG Troches Meiji

Ukuran : 175 mm x 110 mm

Warna : Black

Bahan : HVS 60 g

FG TROCHES MEIJI®

COMPOSITION

Each troche contains :

Neomycin (Fradiomycin) 2.5 mg (potency)
Gramicidin 1.0 mg (potency)

PHARMACOLOGY

Neomycin (Fradiomycin) and Gramicidin are antibiotic that acted bactericidal, active to staphylococci and streptococci and produced an additive effect.

INDICATION

Stomatitis infections due to Neomycin (Fradiomycin) and Gramicidin susceptible strains of staphylococci and streptococci and prevention of postoperative (oral surgery) infections.

DOSAGE AND ADMINISTRATION

In general, administer 1 or 2 troches to adults and 1 troche to children 4 to 5 times a day. The troches should be dissolved in the oral or buccal cavity or under the tongue.

PRECAUTION AND WARNING

- 1). Before use of this product, as a rule, confirm bacterial sensitivity to prevent development of resistant bacteria. The period of administration should be restricted to within the minimum requirement.
- 2). Do not administer the troches for more than one week.
- 3). Discontinue treatment upon the onset of hypersensitivity reactions.
- 4). Use in Elderly.

The product should be administered carefully to elderly patients, since adverse reactions such as avitaminosis are likely to occur.

ADVERSE REACTIONS

Black hairy tongue, oral mucosal redness, glossitis may infrequently occur. Rarely, symptoms of vitamin K deficiency, such as protrombinemia and bleeding tendency and of vitamin B deficiency, such as glossitis, stomatitis, anorexia and neuritis, may occur. These symptoms are likely to occur in poorly nourished, aged or emaciated patients.

CONTRA INDICATION

Do not administer the troches to patients with a history of hypersensitivity reaction to any component of the product and patients with history of hypersensitivity reactions to aminoglycosides such as Streptomycin, Kanamycin, Gentamicin and Neomycin (Fradiomycin) or Bacitracin.
